

ALMA MATER STUDIORUM  
UNIVERSITÀ DI BOLOGNA

# **Broadband Satellite Communications the DVB-RCS-NG Standard**

**Alessandro Vanelli-Coralli**  
**University of Bologna**  
**([alessandro.vanelli@unibo.it](mailto:alessandro.vanelli@unibo.it))**

## ● What is it?

- A broadband access system via satellite for fixed and mobile applications

## ● Market segments

### ● Fixed networks

- Consumer, Multi-dwelling, Corporate, SCADA

### ● Mobile networks

- Aeronautical, Railway, Vehicular, Nomadic, Maritime

## ● Objectives

- Low cost for consumer terminal
- Robustness
- Capabilities competitive with ADSL2+ and cable
- Ability to support star and mesh networks
- Interoperability at all layers
- Fast definition of the standard

---

**Broadband Access:  
a key element for economic recovery**

- Development of “Broadband Access” is considered worldwide as a key element for Economic Recovery:
  - The European Commission, as part of its “Economic Recovery Plan”, aims at achieving 100 % high-speed internet coverage for all citizens by 2010
    - 30% of the European Rural Areas are not reached by broadband access
    - constant rate investment until 2015 in “broadband access” can produce 1million jobs and 850 billion economy growth
    - 1 billion euro has been earmarked in January 2009 to extend broadband access to rural areas
  - On November 5, 2007, the European Parliament and the Council of Ministers agreed a new telecom package that foresees 12 reforms among which
    - “Accelerating broadband access for all Europeans”
    - “Encouraging competition and investment in next generation access networks”
- The US Government issued “the American Recovery and Reinvestment Act” on February 2009
  - The extension fo broadband deployment in unserved, underserved, and rural areas and to strategic institutions is identified as a way to create jobs, spur investments in technology and infrastructure, and provide long-term economic benefits
  - 7.2 billion dollars have been reserved as “Broadband Stimulus”

# Broadband penetration

Source: OECD

# Broadband Penetration and Country Landmass

# Broadband penetration vs. Population dispersion

Source: OECD

# Broadband penetration vs. GDP per capita

Source : OECD

# Broadband Service Cost

Entry and average monthly broadband price as a percentage of monthly GDP per capita

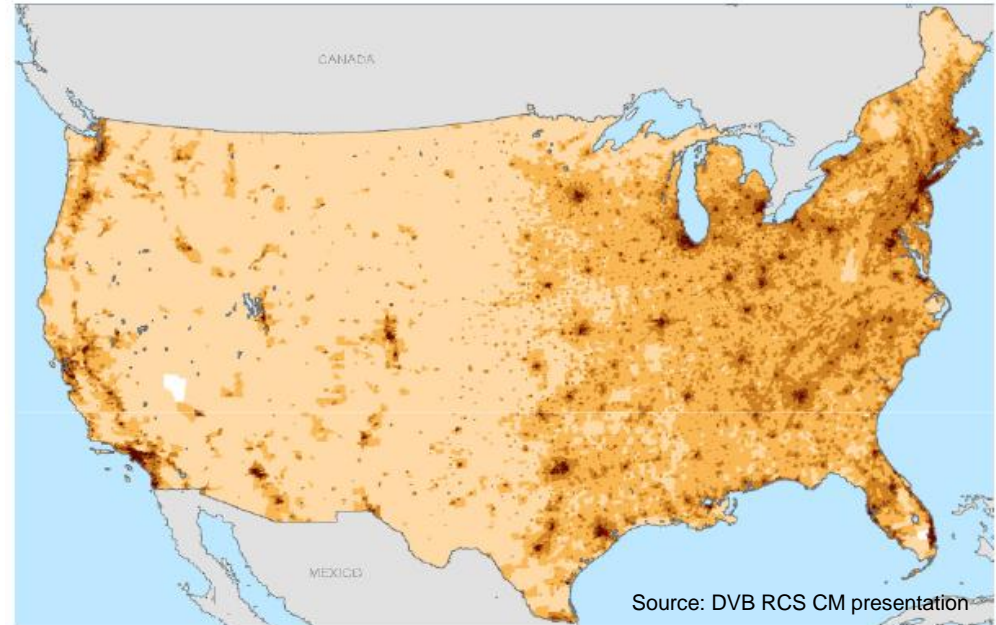

Source: OECD

- **Broadband penetration is limited by the service cost and service quality , e.g.**

- Wildblue customers' location closely follows the population density map
- There almost no perceived bias towards rural area
- Customers are typically suburban with poor DSL services

- Recent studies hve shown that the coverage costs through a fiber infrastructure increase exponential with the coverage (the last 7% coverage would cost as much as the entire network!)
- Unlikely that the total coverage objective can be reached thorough a fiber-based approach (too expensive)
  - Wireless solutions among, which Satellite Networks ,represent a viable and competitive alternative provided that service cost and quality are comparable

# Examples of Service offering on 2-way satellite Broadband Access

## Offer Service Provider X

Equipment Cost: €299-399

| Down-link (kbps) | Up-link (kbps) | Volume (GB)    | €/m   |
|------------------|----------------|----------------|-------|
| 2048             | 384            | 1.8 (Down +Up) | 29.90 |
| 2048             | 384            | 3.0 (Down +Up) | 37.90 |
| 2048             | 384            | 5.0 (Down +Up) | 54.90 |
| 2048             | 384            | 9.0 (Down +Up) | 94.90 |

## Offer Service Provider Y

Equipment Cost: €399

| Down-link (kbps) | Up-link (kbps) | Volume (GB)   | €/m   |
|------------------|----------------|---|-------|
| 512              | 96             | Progressive bit-rate decrease starting from 0.8 GB Down, 0.15 GB Up | 29.90 |
| 1024             | 128            | from 1.4 GB Down, 0.25 GB Up  | 39.90 |
| 2048             | 128            | from 2.24 GB Down, 0.4 GB Up  | 69.90 |

## Offer Service Provider Z

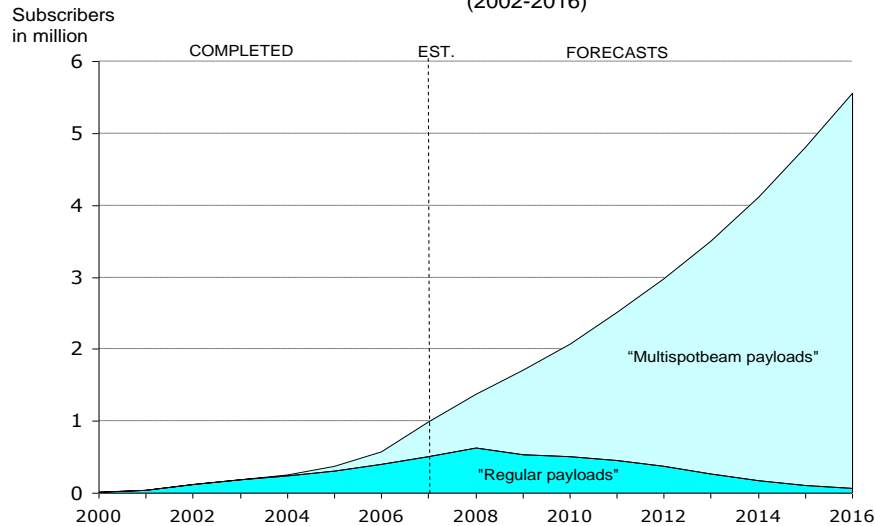

Equipment Cost: €615

| Down-link (kbps) | Up-link (kbps) | Volume (GB)      | €/m   |
|------------------|----------------|------------------|-------|
| 512              | 256            | 5.0 (Down + Up)  | 22.00 |
| 1024             | 256            | 10.0 (Down + Up) | 33.00 |
| 2048             | 512            | 15.0 (Down + Up) | 44.00 |
| 3072             | 768            | 20.0 (Down + Up) | 55.00 |

# Broadband Satellite Communications: market perspective (1/2)

Growth of Subscriptions to Consumer Satellite Broadband Access  
Breakdown between Regular and Multispotbeam Payloads  
(2002-2016)

Forecasts of terminals served by multispotbeam satellite systems  
(consumer broadband & corporate networks, 2006-2016)

Source: Euroconsult 2007

- Total broadband market size available > 20 Million in Europe and North America
- The cost of the service will significantly drop due to a more efficient exploitation of the spectrum thus making the consumer market more appealing
- Satellite broadband access market booming thanks to multi-spot satellite systems

- Large multi-spot beam satellite networks, most in Ka band have recently been deployed or are being developed and will be operational over the coming years:
  - US:
    - WildBlue (2006, 30 Gbps, 41 beams),
    - Spaceway-3 (2007, 10 Gbps, 100 beams),
    - ViaSat-1 (2011, 100 Gbps)
  - Europe:
    - HylasOne (2009, 8 beams),
    - KaSat (2010, 70 Gbps, 80 beams)
  - Asia/Pacific:
    - IPStar-1 (2005, 84 Ku beams)
- Terminals market:
  - 125,000 consumer VSATs have been shipped in the US in 2006 (source: COMSYS)
  - WildBlue ordered 500,000 terminals in 2007
  - By mid-2007, Hughes and WildBlue had already around 450,000 subscribers (source: COMSYS)
- Large population in Europe, but also in Latin America, still not reached by terrestrial access technologies

- **Need for an open standard to ensure**
  - Low cost device: economy of scale in chip development and manufacturing
  - Terminal Interoperability

- **Next generation of Digital Video Broadcasting Return Channel via Satellite**

# The Digital Video Broadcasting (DVB) Project

- Point to multipoint transmission standards for large volume of information at high data rate
- Information is mainly audio and video (MPEG2 format) but can also be other data
- Transmission (FL)
  - DVB-S and S2 → Satellite channel
  - DVB-T/H → Terrestrial channel (fixed and mobile)
  - DVB-SSP → Satellite Services to Portables (aka DVB-SH)
  - DVB-T2 → Terrestrial 2° generation
  - DVB-NGH → New Generation Handheld (still in study mission phase)
  - DVB-C → Cable channel
  - DVB-MS → Multipoint transmission system @ 10 GHz and above
  - DVB-MC → Multichannel Distribution System below 10 GHz
  - DVB-MT → Microwave terrestrial transmission
- Interactivity (RL)
  - DVB-RCC → cable TV distribution systems
  - DVB-RCP → ISDN, PSTN
  - DVB-RCD → DECT
  - DVB-RCL → Local Multipoint Distribution Systems (LMDS)
  - DVB-RCG → GSM
  - DVB-RCCS → Satellite Master Antenna TV (SMATV)
  - DVB-RCS → Satellite (now with Mobile Extension DVB-RCS+M)
  - DVB-RCT → Digital TV including multiple access OFDM
  - DVB-RCGPRS → GPRS
- Ad-hoc groups
  - DVB-CBMS → Convergence of Broadcast and Mobile Services

# DVB Broadcasting and Broadband Standards

## DVB-S2 (published in 2003)

- Strong forward error correction (LDPC)
- High order modulation
- Adaptive Coding and Modulation (interactivity)

## DVB-SH specification for Broadcasting to handheld

- frequency bands below 3GHz
- DVB-SH A (OFDM DVB-H sat. link + DVB-H terr. Link)
- DVB-SH B (S2 modified sat. link + DVB-H terr. Link)

## DVB-S (1993)

## DVB-S2

## DVB-SH

**TODAY**

## DVB-H added to DVB-T (2004):

- broadcasting to handheld
- evolution of DVB-T

## DVB-T2 (started in 2007):

- Evolution of DVB-T
- Specifications approved in 2008

## DVB-T (1997)

## DVB-T/H

## DVB-T2

## DVB-RCS Annex L (April 2005)

- Guidelines for RCS applicability to mobile
- Limited scope, no changes to the standard

## Return channel via Satellite (interactivity)

## DVB-RCS (2001)

## RCS+M

## DVB-RCS-NG

## DVB-RCS (published in 2001)

- Fixed services (e-medicine, e-education, internet, VoIP)
- VSAT antennas → AWGN Channel
- Mobility effects only due to satellite movement

## DVB-RCS+M extension to mobile broadband (March 2006)

- Mobile Services to collective terminals (aircraft, ships, train, buses, cars)
- Specifications approved in June 2008

## DVB-RCS-Next generation

- Activity started end of 2008

# DVB-RCS Next Generation: a new standard

## ● Objectives (from CM-RCS)

- Low cost for consumer terminal
- Robustness
- Capabilities competitive with ADSL2+ and cable
- Ability to support star and mesh networks
- Interoperability at all layers
- Fast definition of the standard

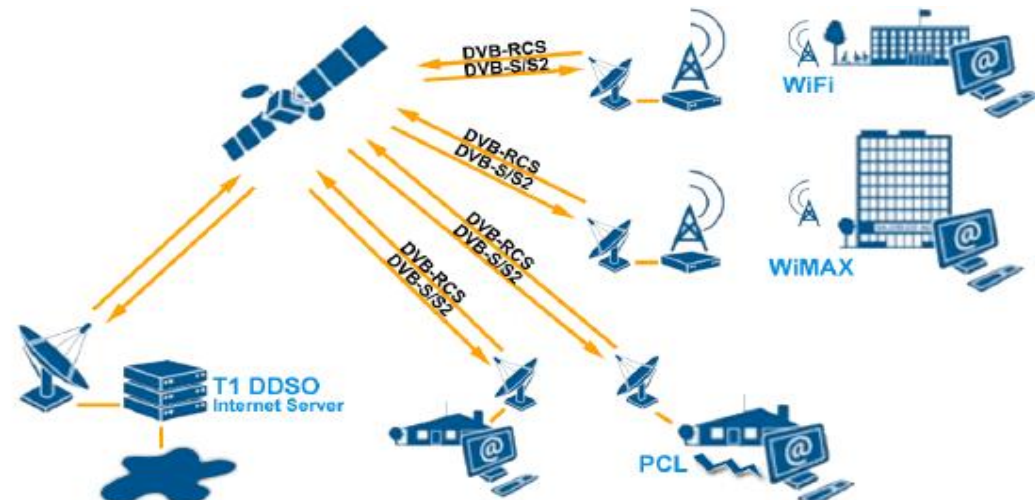

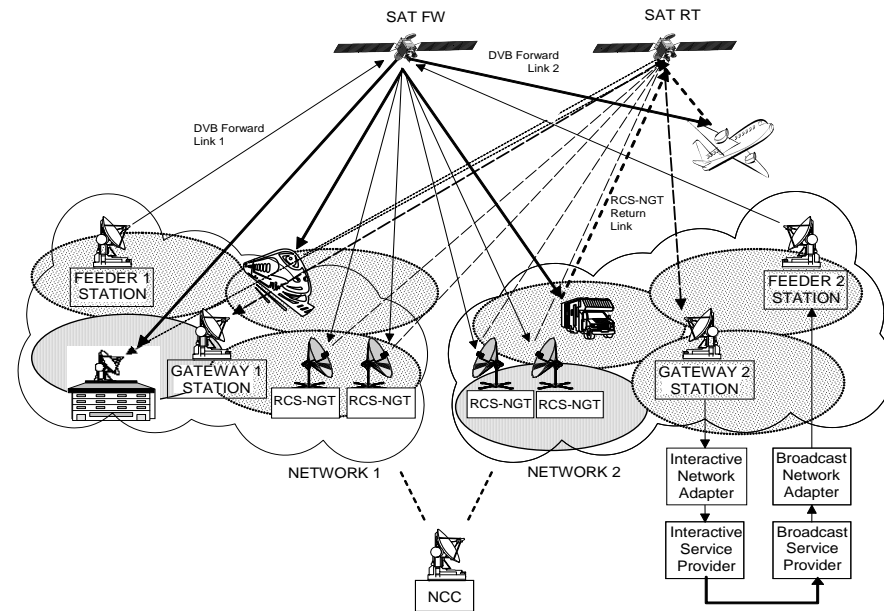

## ● Market segments (from CM-RCS)

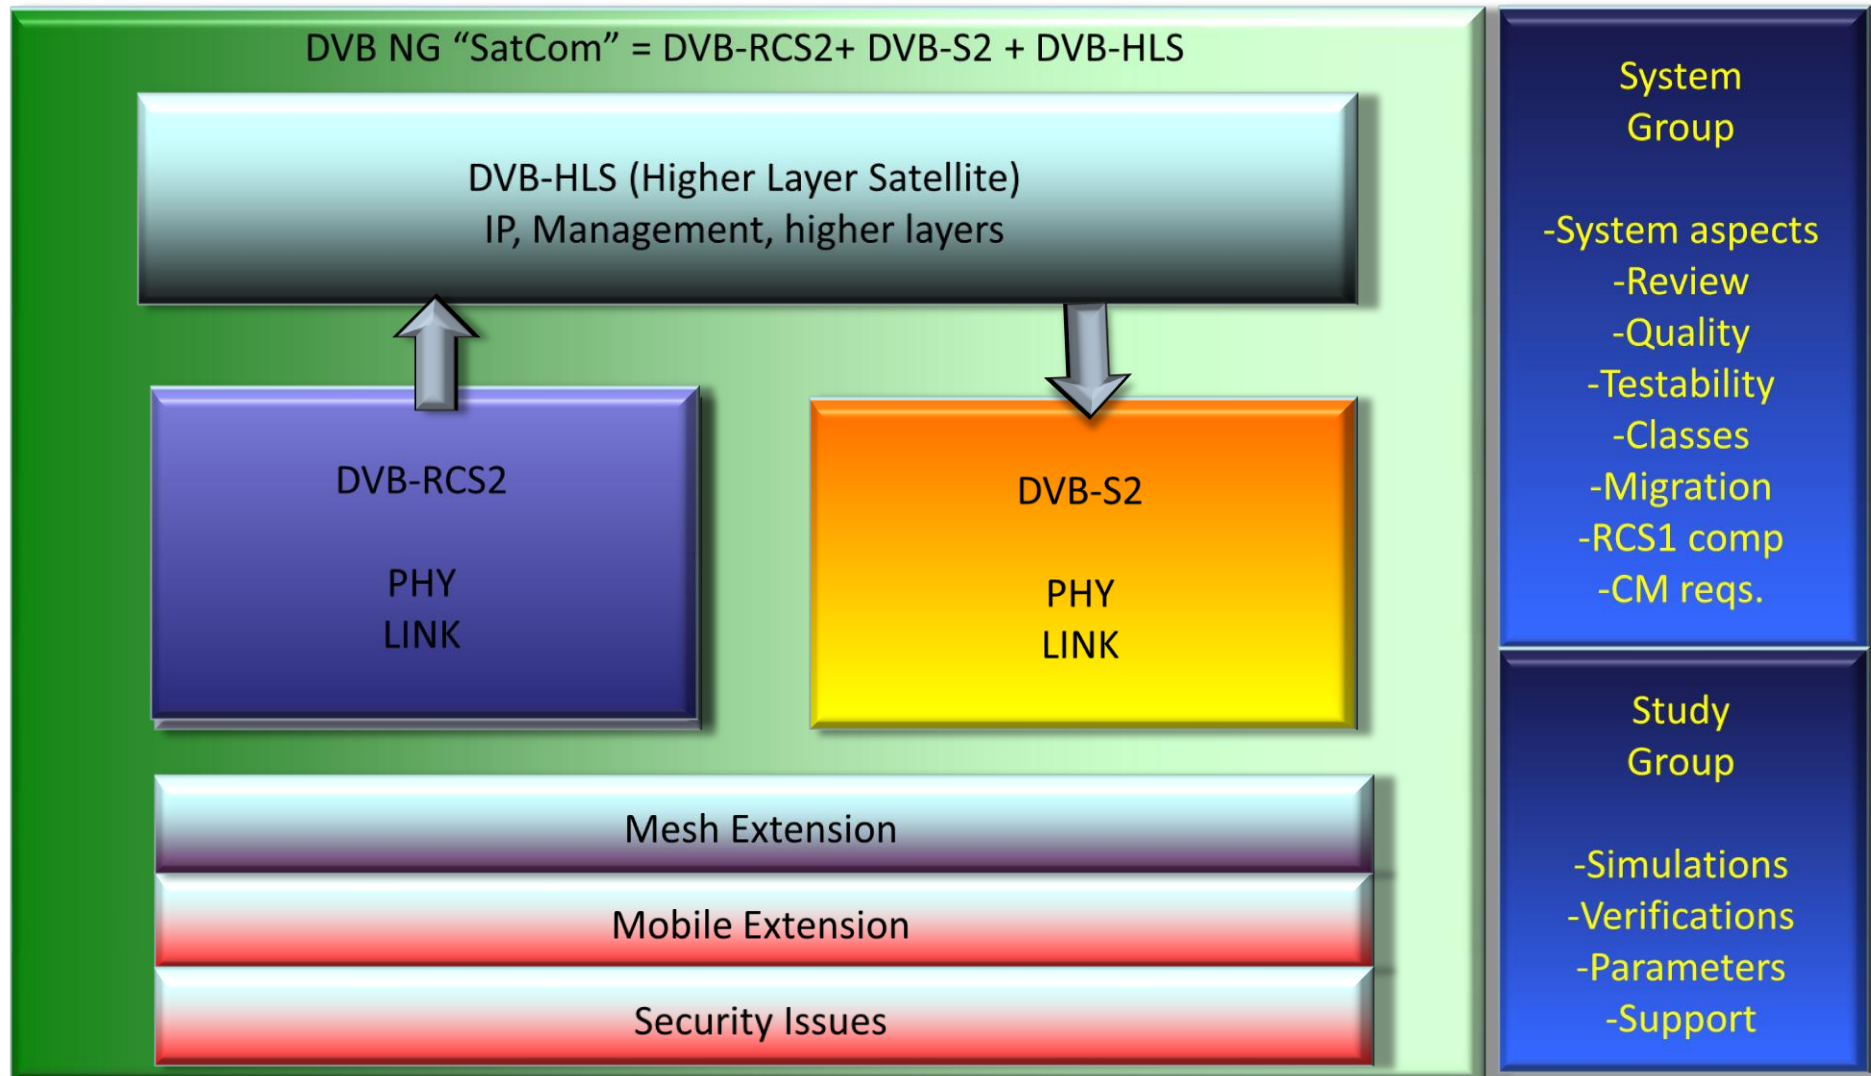

### ● Fixed networks

- Consumer, Multi-dwelling, Corporate, SCADA

### ● Mobile networks

- Aeronautical, Railway, Vehicular, Nomadic, Maritime

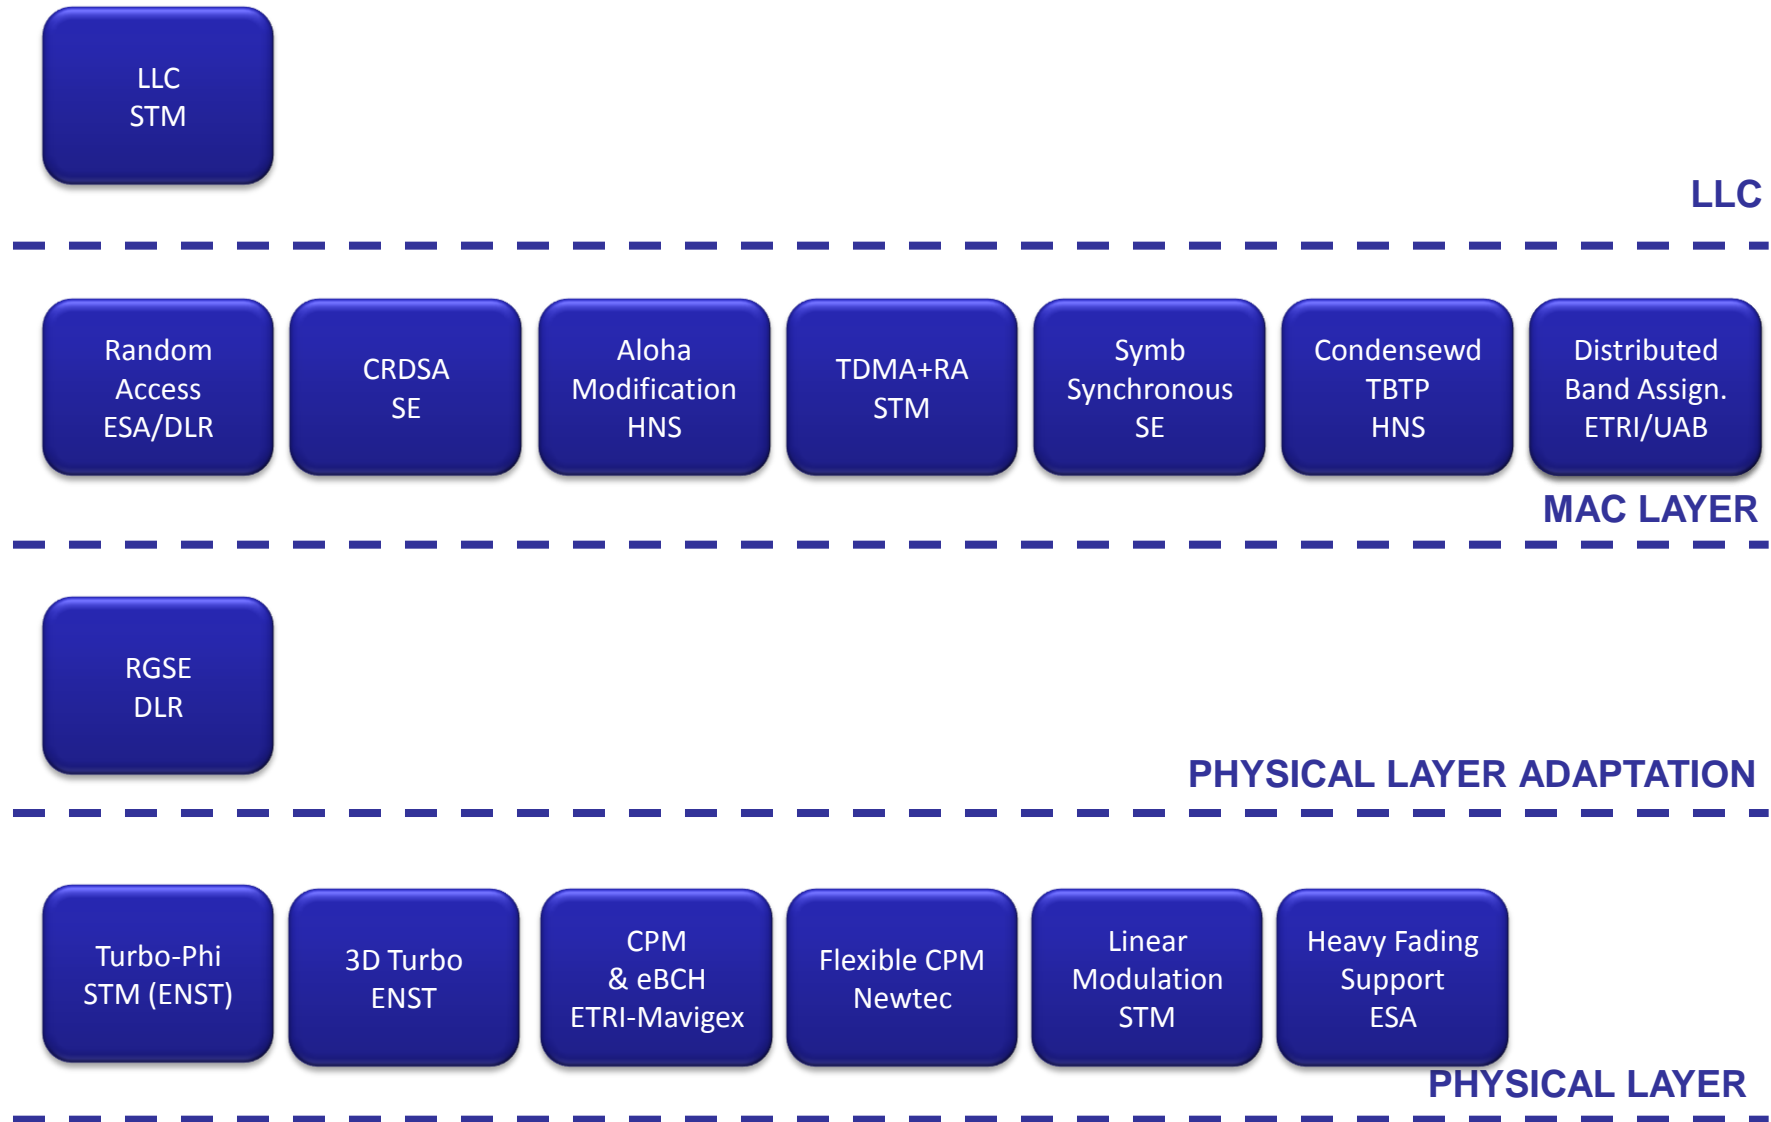

# DVB-RCS-NG Call For Technologies (from TM-RCS)

| Technology Area        | Aspects                                   | Example of Technology Proposals  |
|------------------------|---|--|
| <b>Section A</b>       |   |  |
| Physical Layer         | Coding                                    | Turbo-Phi, 3D Turbo, LDPC  |
|                        | Modulation                                | BPSK, QPSK, 8PSK, M-APSK/M-QAM, CPM, ACM, SRRC with low rolloff factor |
|                        | Framing                                   | Pilot symbol insertion, Enhanced Framing                               |
|                        | Advanced Techniques                       | Co-/Adjacent-channel interference cancellation                         |
| Lower Link Layer (MAC) | Access Scheme                             | Enhanced Random Access Channel integrated with DAMA                    |
|                        |   | Continuous carrier integrated with DAMA                                |
|                        | IP Encapsulation                          | GS profile with GSE encapsulation                                      |
|                        | Transport of Return Link Signalling       | Optimized Signalling   |
| <b>Section B</b>       |   |  |
| Upper Link Layer       | Virtual Satellite Networks                | MPLS, VLAN (IEEE 802.1Q), VPN  |
|                        | Differentiated QoS & Bandwidth Management | Request classes, QoS mapping   |
|                        | Support for TRANSEC                       | Hooks for TRANSEC  |
| IP and Upper Layers    | Header Compression                        | ROHC   |
|                        | Performance Enhancing Proxy               | TCP acceleration, web caching  |
|                        | IP QoS Differentiation                    | Diffserv   |
|                        | Support for COMSEC                        | COMSEC and PEP integrated solution                                     |
| Management and Control | FCAPS                                     | Interfaces towards terrestrial broadband networks                      |
|                        |   | Service management interfaces  |
|                        |   | Management protocols   |
|                        |   | SW download protocols  |
|                        |   | C2P  |
|                        | Installation Procedures                   | Plug&Play Tools<br>Terminal configuration                              |

## PHY LAYER SELECTION DETOUR

## ● Continuous Phase Modulation

- Good performance against nonlinear effect/ freq. instability
- Reduce the ODU cost against linear modulation
- More flexibility to select ODU component according to IDU function/capability

## ● Linear Modulation

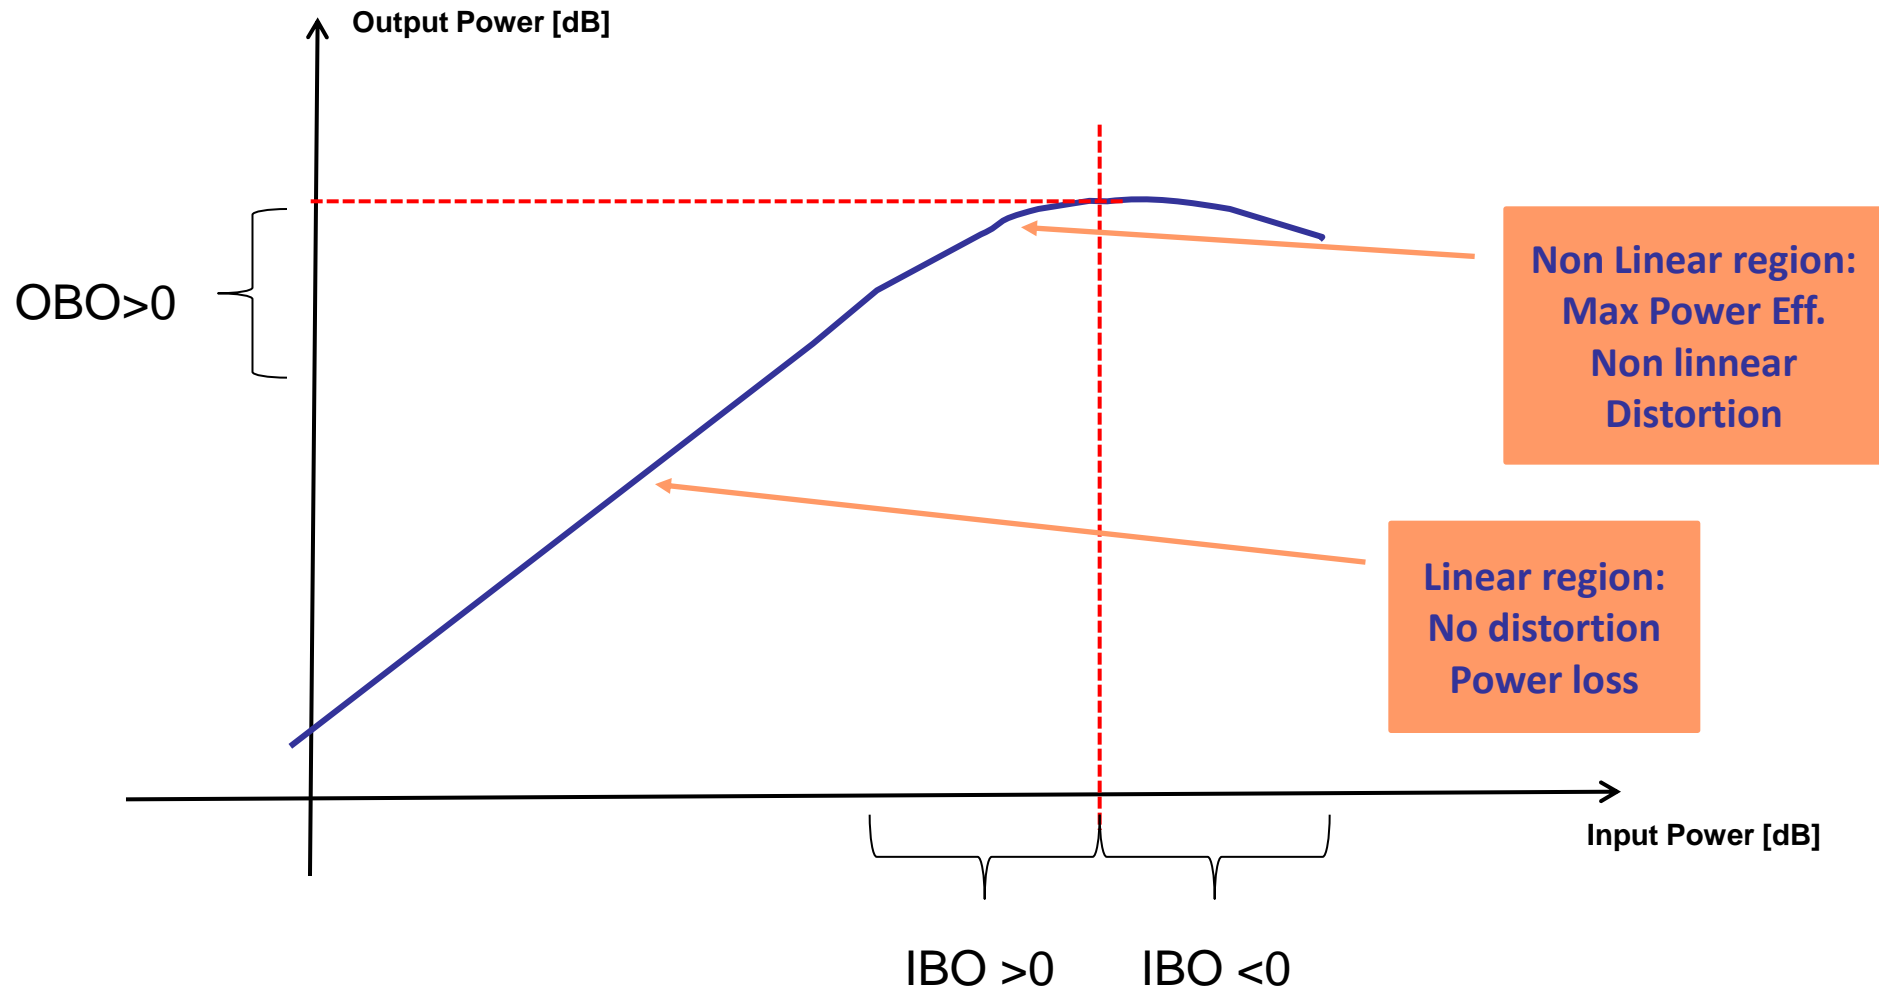

- High spectral efficiency can be achieved
- Evolutionary approach wrt RCS 1<sup>o</sup> generation
- Suitable for high end terminals (e.g., professional )
- Less robust wrt non-linear distortion

- **FEC**
  - Turbo- $\Phi$  coding scheme
  - Several burst size (Log-on, Control, Short and Long)
  - 5 vs. 8 iterations according to the burst size
- **Modulation scheme**
  - Linear modulation: QPSK, 8PSK, and 16QAM
- **Pulse shaping**
  - Fixed roll-off factor: 0.20
- **Spectral efficiency**
  - From 0.55 bit/s/Hz to 2.80 bit/s/Hz
- **Frame format**
  - Preamble, distributed pilots and postamble (size and distribution depends on the code-modulation pair)
  - Known symbols overhead
    - about 35% for Log-on/Control bursts
    - from 3% up to 14% for traffic bursts
  - Bursts should match a slot-grid

- **FEC**
  - extended-BCH scheme
  - Continuous packet sizes
  
- **Modulation scheme**
  - Quaternary CPM waveform
  - Bandwidth limitation 99% and 77%
  
- **Spectral Efficiency**
  - 0.75 – 1.0 – 1.25 – 1.5 – 1.83 bit/s/Hz
  
- **Frame format**
  - Preamble and midamble: always 32+32 known symbols
  - Overhead below 10% for the traffic bursts

**ACI=+3dB**

| Max baud rate [Mbaud] | 10.67 | 7.2               | 7.2   | 7.2          | 9.6   |

Source: DVB-RCS 1130

- **Link layer performance**
  - Linear modulations have comparable performance to the CPM modulations up to about 1.8 b/s/Hz when considering operations at the ODU optimum working point and no ODU instabilities
  - At higher spectral efficiency linear modulations perform better than CPM's
  - CPM schemes show significantly better performance than linear modulations when ODU instabilities are considered
- **System level performance simulations**
  - For the considered network scenario (interference limited) CPM schemes outperform linear modulations in average spectral efficiency when considering ODU instabilities
  - For networks with higher C/I in the uplink linear modulations could perform better (example lower frequency re-use, separate RX/TX satellite antennae) than CPM
  - Whenever low terminal output power is considered CPM approach is preferable
- **Decision not yet taken → DVB-RCS Commercial Module to select one of the following two configurations:**
  - Linear modulation for high end terminals and CPM for low cost terminals
  - Linear modulation only for both high end and low cost terminals

- Performance is not everything in system design!
- Robustness is a plus
- Commercial Interests are also important in standardization bodies

**The final decision will be the best weighted trade-off among performance, robustness, flexibility, and commercial support**

**END OF DETOUR**

- Activity started:
  - End of 2008
- Call for Technology deadline:
  - May 4, 2009
- Physical layer definition:
  - January 2010
- Specifications for fixed systems:
  - End 2010
- Specifications for mobile systems:
  - End 2011

- **Broadband Access is recognized as cornerstone for economic development**
- **Satellite broadband communication market has huge potential and can play a significant role in the “Economic Recovery”**
- **Satellite technology is mature for large multi-spot beam satellite networks able to provide for high capacity access competitive with DLS connection**
- **Key elements to meet the market requirements are**
  - **Service quality and availability**
  - **Service Costs**
- **A new initiative (DVB-RCS-NG) is on-going to create an open standard able to provide the enablers for low cost and high efficient broadband satellite systems**
- **The new standard is foreseen to be available by mid/end 2010**

- The ESA “2° Generation DVB-RCS Standardization Support” project
- The DVB-RCS Study Group
- The Digicomm Group of the University of Bologna

# Thank you!
